UNITI EXPO 2026: SGB PRESENTS RECENT DEVELOPMENTS IN LEAK PREVENTION TECHNOLOGY STAND B02, HALL 5

Worldwide operating manufacturer of leak prevention technology SGB GmbH is very pleased to announce its participation at “UNITI expo”, 19–21 May 2026 in Stuttgart, Germany. At stand B02, hall 5 SGB shows its latest technical developments in leak detection technology.

SGB's leak prevention systems are used worldwide to monitor double-walled tanks and pipes that store or convey liquids hazardous to groundwater. They are used in various operational areas like filling stations, tank farms, refineries, chemical plants or domestic fuel oil tanks. Working either with overpressure or vacuum SGB leak detectors monitor reliably and continuously both walls. In the event of a leak they give an alarm before any stored or transported product can enter and harm the environment – an indispensable safety measure in environmental and water protection.

About UNITI expo: UNITI expo is the leading European trade fair for the retail petroleum and car wash industries. The biennial event, with its program of seminars and compact three-day format, is specially tailored to the needs of its target audience. With more than 500 exhibitors spanning 45,000 square meters, trade visitors will have the opportunity to learn about the developments, products, and trends.

About SGB:

To ensure safety for double-walled tanks, pipes and containments for man and environment – this is the aim and the claim of the inventor and manufacturer of leak prevention technology SGB in Siegen, Germany. Over 63 years of technical knowledge and development and over 500,000 leak detection systems currently in use attest expertise and the highest level of quality. This is guaranteed by unification of all production processes under one roof: from invention over production to installation and maintenance. National and international customers trust in one of the market leaders in leak prevention technology.
