Welcome to 2024!

At SGB, we are excited to offer our leak detectors to help you safely, reliably, and cost-effectively monitor your double-walled tanks and pipework. Our leakage probes are also perfect for collection chambers and manholes.

Don't hesitate to contact us for advice on how to start the new year safely with our products!

LS 50: Safety for critical infrastructure

Our LS 50 leakage probe is the perfect solution for ensuring safety and protection of critical infrastructure, including data centres and other important facilities such as those for energy supply, communication, and material supply and disposal.

With its ability to monitor systems that use non-explosive liquids such as heating oil, diesel, and water, you can rest assured that your operations are in good hands. Our probe is designed to detect any liquid present in collecting chambers, sumps, or shafts.

We offer three design variants of the probe:

- float switch,
- conductivity sensor,
- capacitive sensor.

The early alarm will give you valuable time to actively take further measures to protect your system.

MORE

Are you ready to go outside? We are!

- High-quality stainless-steel housing
- IP 66
- Operating temperature -20 to +60°C
- Separate cable glands

The new stainless steel housing of the indicating unit LAE P is particularly suitable for outdoor installation (P = protected/weatherproof). Thanks to the use of stainless steel, the housing is robust and resistant to wind and weather. Separate cable glands (industry standard) ensure quick, clear and clean cable entry.

Demo boards for your training courses

Theory is good, practice is better! Our training courses follow this principle by using our devices in real-life scenarios to demonstrate their functional principles and setup procedures. Handy: The participants can carry out a commissioning or function test directly.

Are you offering trainings yourself? Our demo boards make it clear, memorable and instructive for the participants.

- Available for many tank and pipe leak detectors
- Practical accessories: tripod, case

14 – 16 May 2024, Stuttgart, Germany

UNITI expo 2024: We are exhibiting

Come join us for three days of informative lectures and demonstrations. We will be exhibiting at the leading European trade fair for the petrol station and car wash industry in Stuttgart in May.

SGB booth can be found in Hall 5 at Stand B08.

In Hall 5 (Technology, Payment, and Logistics area), SGB will present its safe and proven leak detectors for monitoring double-walled tanks and pipelines. Learn about the latest developments and exchange ideas with our experts.

Save the date: May 14 to 16, 2024, UNITI expo in Stuttgart.

We look forward to seeing you!
